Agrément Certificate

07/4435

Product Sheet 1 Issue 6

PERMO AIR 160 AIR OPEN ROOFING MEMBRANE

FOR USE IN WARM NON-VENTILATED PITCHED ROOF SYSTEMS

This Agrément Certificate Product Sheet⁽¹⁾ relates to Permo Air 160 Air Open Roofing Membrane, a polyolefin laminate composite for use in warm non-ventilated pitched roof systems.

(1) Hereinafter referred to as 'Certificate'.

The assessment includes

Product factors:

- compliance with Building Regulations
- compliance with additional regulatory or non-regulatory information where applicable
- evaluation against technical specifications
- assessment criteria and technical investigations
- uses and design considerations

Process factors:

- compliance with Scheme requirements
- installation, delivery, handling and storage
- production and quality controls
- maintenance and repair

Ongoing contractual Scheme elements†:

- regular assessment of production
- formal 3-yearly review

KEY FACTORS ASSESSED

- Section 1. Mechanical resistance and stability
- Section 2. Safety in case of fire
- Section 3. Hygiene, health and the environment
- Section 4. Safety and accessibility in use
- Section 5. Protection against noise
- Section 6. Energy economy and heat retention
- Section 7. Sustainable use of natural resources
- Section 8. Durability

The BBA has awarded this Certificate to the company named above for the product described herein. This product has been assessed by the BBA as being fit for its intended use provided it is installed, used and maintained as set out in this Certificate.

On behalf of the British Board of Agrément

Date of Sixth issue: 15 November 2023
Originally certificated on 12 July 2007

Hardy Giesler
Chief Executive Officer

This BBA Agrément Certificate is issued under the BBA's Inspection Body accreditation to ISO/IEC 17020. Sections marked with † are not issued under accreditation.

The BBA is a UKAS accredited Inspection Body (No. 4345), Certification Body (No. 0113) and Testing Laboratory (No. 0357).

Readers MUST check that this is the latest issue of this Agrément Certificate by either referring to the BBA website or contacting the BBA directly.

The Certificate should be read in full as it may be misleading to read clauses in isolation.

Any photographs are for illustrative purposes only, do not constitute advice and should not be relied upon.

SUMMARY OF ASSESSMENT AND COMPLIANCE

This section provides a summary of the assessment conclusions; readers should refer to the later sections of this Certificate for information about the assessments carried out.

Compliance with Regulations

Having assessed the key factors, the opinion of the BBA is that Permo Air 160 Air Open Roofing Membrane for use in warm non-ventilated pitched roof systems, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements of the following Building Regulations:

The Building Regulations 2010 (England and Wales) (as amended)

Requirement:	B3(4)	Internal fire spread
Comment:		The product can contribute to satisfying this Requirement. See section 2 of this Certificate.
Requirement:	B4(1)	External fire spread
Comment:		The product is restricted by this Requirement in some circumstances. See section 2 of this Certificate.
Requirement:	C2(b)	Resistance to moisture
Comment:		The product will contribute to a roof satisfying this Requirement. See section 3 of this Certificate.
Requirement:	C2(c)	Resistance to moisture
Comment:		The product can contribute to a roof satisfying this Requirement. See section 3 of this Certificate.
Regulation:	7(1)	Materials and workmanship
Comment:		The product is acceptable. See sections 8 and 9 of this Certificate.

The Building (Scotland) Regulations 2004 (as amended)

Regulation:	8(1)	Fitness and durability of materials and workmanship
Comment:		The product can contribute to a construction satisfying this Regulation. See sections 8 and 9 of this Certificate.
Regulation:	9	Building standards - construction
Standard:	2.4	Cavities
Comment:		The product can contribute to satisfying this Standard with respect to clause 2.4.2 ⁽¹⁾⁽²⁾ . See section 2 of this Certificate.
Standard:	2.6	Spread to neighbouring buildings
Comment:		The product is restricted under clauses 2.6.4 ⁽¹⁾⁽²⁾ , 2.6.5 ⁽¹⁾ and 2.6.6 ⁽²⁾ of this Standard in some circumstances. See section 2 of this Certificate.
Standard:	2.7	Spread on external walls
Comment:		The product is restricted under clause 2.7.1 ⁽¹⁾⁽²⁾ of this Standard. See section 2 of this Certificate.
Standard:	3.10	Precipitation
Comment:		The product will contribute to a roof satisfying clause 3.10.1 ⁽¹⁾⁽²⁾ of this Standard. See section 3 of this Certificate.

Standard:	3.15	Condensation
Comment:		The product will contribute to limiting the risk of interstitial condensation, with reference to clauses 3.15.1 ⁽¹⁾⁽²⁾ , 3.15.3 ⁽¹⁾⁽²⁾ and 3.15.7 ⁽¹⁾⁽²⁾ of this Standard. See section 3 of this Certificate.
Standard:	7.1(a)	Statement of sustainability
Comment:		The product can contribute to meeting the relevant requirements of Regulation 9, Standards 1 to 6 and therefore will contribute to a construction meeting a bronze level of sustainability as defined in this Standard.
Regulation:	12	Building standards applicable to conversions
Comment:		All comments given for the product under Regulation 9, Standards 1 to 6 also apply to this Regulation, with reference to clause 0.12.1 ⁽¹⁾⁽²⁾ and Schedule 6 ⁽¹⁾⁽²⁾ .
		(1) Technical Handbook (Domestic). (2) Technical Handbook (Non-Domestic).

The Building Regulations (Northern Ireland) 2012 (as amended)

Regulation:	23(1)(a)(i)	Fitness of materials and workmanship
Comment:	(iii)(b)(i)	The product is acceptable. See sections 8 and 9 of this Certificate.
Regulation:	28(b)	Resistance to moisture and weather
Comment:		The product will contribute to a roof satisfying this Regulation. See section 3 of this Certificate.
Regulation:	29	Condensation
Comment:		The product can enable a roof to satisfy this Regulation. See section 3 of this Certificate.
Regulation:	35(4)	Internal fire spread – structure
Comment:		The product can contribute to satisfying this Regulation. See section 2 of this Certificate.
Regulation:	36(a)	External fire spread
Comment:		The product is restricted by this Regulation, in some circumstances. See section 2 of this Certificate.

Additional Information

NHBC Standards 2023

In the opinion of the BBA, Permo Air 160 Air Open Roofing Membrane for use in warm non-ventilated pitched roof systems, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements in relation to *NHBC Standards*, Chapter 7.2 *Pitched roofs*.

Fulfilment of Requirements

The BBA has judged Permo Air 160 Air Open Roofing Membrane for use in warm non-ventilated pitched roof systems to be satisfactory for use as described in this Certificate. The product has been assessed as a roof tile underlay for use in warm non-ventilated pitched roof systems.

ASSESSMENT

Product description and intended use

The Certificate holder provided the following description for the product under assessment. Permo Air 160 Air Open for use in warm non-ventilated pitched roof systems is a thermally bonded film laminate composite made of polyolefins.

The product has the nominal characteristics given in Table 1.

Table 1 Nominal characteristics of Permo Air 160 Air Open Roofing Membrane

Characteristic (unit)	Value
Mass per unit area (g·m ⁻²)	160
Roll length (m)	50
Roll width (m)	1.0 and 1.5
Colour	Dark blue

Ancillary Items

The Certificate holder recommends the following ancillary item for use with the product, but this material has not been assessed by the BBA and is outside the scope of this Certificate:

- TR Plus Tape.

Applications

The product has been assessed for use as a fully supported (and secured with counter battens and tiling battens) or unsupported underlay (installed by draping over rafters and securing with tiling battens), in warm non-ventilated tiled and slated pitched roof systems constructed in accordance with the relevant clauses of BS 5534 : 2014.

The product may be used over suitable traditional boards with 2 mm gaps, and over rigid insulation where no sarking board is present, either with continuous insulation or insulation placed between the rafters. The product may also be used over suitable timber-based sarking (Type 3 particleboards, Type 3 OSB or Type 2 plywood). In such cases where non-breathable boarding is used a gap should be maintained between the insulation and the boarding and ventilated in accordance with BS 5250 : 2021.

Definitions for products and applications inspected

The following term is defined for the purpose of this Certificate as:

- pitched roof — a roof having a fall in excess of 1:6.

Product assessment – key factors

The product was assessed for the following key factors, and the outcome of the assessments is shown below. Conclusions relating to the Building Regulations apply to the whole of the UK unless otherwise stated.

1 Mechanical resistance and stability

Data were assessed for the following characteristics.

1.1 Resistance to wind uplift

1.1.1 Results of resistance to wind uplift tests to BS 5534 : 2014, Annex A, and consequent Zone of applicability are given in Tables 2 and 3 of this Certificate.

Table 2 Declared wind uplift resistance (Pa)

Product	≤345 mm batten gauge with battened laps ⁽¹⁾	≤250 mm batten gauge with battened laps ⁽¹⁾⁽²⁾	≤345 mm batten gauge with lap taped with TR Plus Tape ⁽¹⁾
Permo Air 160 Air Open Roofing Membrane	1190	2080	2064

(1) Mean of test results.

(2) Underlays with a wind uplift resistance at a 250 mm batten gauge that meet the minimum design wind pressure of 820 Pa for Zone 1 are deemed to satisfy the requirements for use at a 100 mm batten gauge in all wind zones.

Table 3 Zones of applicability of the product according to BS 5534 : 2014, clause A.8

Product	≤345 mm batten gauge with battened laps	≤250 mm batten gauge with battened laps	≤345 mm batten gauge with lap taped with TR Plus Tape
Permo Air 160 Air Open Roofing Membrane	Zones 1 to 3	Zones 1 to 5	Zones 1 to 5

Unsupported

1.1.2 On the basis of data assessed, the product is satisfactory for use in unsupported systems, in the geographical Wind Zones given in Table 3, where a well-sealed ceiling, as defined in BS 9250 : 2007, Clause 3.7, is present and the roof has a ridge height ≤15m, a pitch between 12.5 and 75°, and a site altitude ≤100m, and where topography is not significant. For all other cases, the required uplift resistance must be determined using BS 5534 : 2014 and the Certificate holder's declared wind uplift resistances given in Table 2 of this Certificate.

Supported

1.1.3 On the basis of the data assessed, the product, when fully supported, has adequate resistance to wind uplift forces.

1.1.4 The product may be used at any batten gauge in all Wind Zones when laid over nominally airtight timber based sarking (Type 3 particleboard, Type 3 OSB or Type 2 plywood), and insulation for warm-roof design. It may also be used in applications where slates are nailed directly onto sarking boards.

1.1.5 Timber sarking, such as square-edged butt-jointed planks, is not considered to be airtight and the underlay must be treated as unsupported.

1.2 Resistance to mechanical damage

1.2.1 Results of resistance to mechanical damage tests are given in Table 4.

Table 4 Results of mechanical damage tests

Product assessed	Assessment method	Requirement	Result
Permo Air 160 Air Open Roofing Membrane	Tensile strength to BS EN 12311-1 : 2000 - Control	Declared value 280 N·(50 mm) ⁻¹	Pass
	Longitudinal direction		
Permo Air 160 Air Open Roofing Membrane	Tensile strength to BS EN 12311-1 : 2000 - Control	Declared value 200 N·(50 mm) ⁻¹	Pass
	Transverse direction		
Permo Air 160 Air Open Roofing Membrane	Elongation to BS EN 12311-1 : 2000 - Control	Values achieved	
	Longitudinal direction		58%
	Transverse direction		109%
Permo Air 160 Air Open Roofing Membrane	Nail tear to BS EN 12310-1 : 2000	≥50N	
	Longitudinal direction Transverse direction		Pass Pass
Permo Air 160 Air Open Roofing Membrane	Mullen burst strength to BS 3137 : 1972	Value achieved	778 kN·m ²

1.2.2 On the basis of data assessed, the product has adequate strength to resist the loads associated with the installation of the roof.

2 Safety in case of fire

Data were assessed for the following characteristics.

2.1 Reaction to fire

2.1.1 When tested to BS EN ISO 11925-2 : 2020 and classified to BS EN 13501-1 : 2007, the product achieved a reaction to fire classification, E⁽¹⁾.

(1) Classification report reference H.K-07e/23, issued by FIW München. The report is available from the Certificate holder upon request.

2.1.2 On the basis of data assessed, the product will be restricted in use under the documents supporting the national Building Regulations in some cases.

2.1.3 In England, Wales and Northern Ireland, the product, when used in pitches of greater than 70°, must not be used on buildings that have a storey at least 18 m above ground level and which contain one or more dwellings, an institution, a room for residential purposes (excluding, in Wales and Northern Ireland only, any room in a hostel, hotel or boarding house), student accommodation, care homes, sheltered housing, hospitals or dormitories in boarding schools and, additionally in Northern Ireland, nursing homes and places of lawful detention.

2.1.4 In Scotland, the product, when used in pitches greater than 70°, excluding upstands, must not be used on domestic or shared residential buildings that have a storey more than 11 m above ground level or that are less than 1 m from a boundary.

2.1.5 Designers must refer to the relevant national Building Regulations and guidance for detailed conditions of use, particularly in respect of requirements for substrate fire performance, cavity barriers, service penetrations and combustibility limitations for other materials and components used in the overall construction.

2.1.6 When the product is used unsupported, there is a risk that fire can spread if they are accidentally ignited during maintenance works, eg, by a roofer's or plumber's torch. As with all types of underlay, care must be taken during building and maintenance to avoid ignition.

2.1.7 When the product is used with timber sarking, such as square-edged butt-jointed planks, the reaction to fire will be primarily determined by the sarking.

3 Hygiene, health and the environment

Data were assessed for the following characteristics.

3.1 Weathertightness

3.1.1 Results of weathertightness tests are given in Table 5.

Product assessed	Assessment method	Requirement	Result
Permo Air 160 Air Open Roofing Membrane	Water resistance to BS EN 1928 : 2000	No leakage	Pass
	Resistance to streaming water to MOAT 69 : 2004	No dampness	Pass
	Unsupported Supported	No dampness	Pass

3.1.2 On the basis of data assessed, the product can be used supported without affecting its water resistance.

3.1.3 The product is Class W1 in accordance with BS EN 13859 : 2010 and will resist the passage of water, wind-blown snow and dust into the interior of a building, under all conditions to be found in a roof constructed in accordance with the relevant clauses of BS 5534 : 2014.

3.1.4 The product resists penetration of liquid water and consequently may be used as temporary waterproofing prior to the installation of slates or tiles. The period of such use must, however, be kept to a minimum as is given in BBA Information Bulletin No. 2 *Permeable Roof Tile Underlay — Guide to Good Site Practice*.

3.2 Condensation

3.2.1 Results of water vapour resistance and air permeability tests are given in Table 6.

Product assessed	Assessment method	Requirement	Result
Permo Air 160 Air Open Roofing Membrane	Water vapour resistance to BS EN 12572 : 2001 – Condition C	Value achieved	0.0319 MN·s·g ⁻¹
	Water vapour diffusion – equivalent air thickness to BS EN 12572 : 2001 – Condition C		S _d = 0.006 m
Permo Air 160 Air Open Roofing Membrane	Air permeability to BS EN 13141-2 : 2004	Value achieved	
	Air flow per unit area at 1 Pa test pressure		2.87 m ³ ·h ⁻¹ ·m ⁻²
	Air flow per unit area at 50 Pa test pressure		63.19 m ³ ·h ⁻¹ ·m ⁻²

3.2.2 On the basis of the data assessed, the product is suitable for use in warm non-ventilated pitched roof systems, in accordance with section 9.1 of this Certificate.

3.2.3 For the purposes of condensation calculations, the product's water vapour resistance may be taken as not more than 0.1 MN·s·g⁻¹ and for roofs designed in accordance with BS 5534 : 2014 or BS 5250 : 2021, it may be regarded as a Type LR underlay.

3.2.4 The product is also air permeable, allowing a significant additional mechanism for water vapour egress by convection.

4 Safety and accessibility in use

Data were assessed for the following characteristics.

4.1 Slip Resistance

4.1.1 Results of slip resistance tests are given in Table 7.

Table 7 Results of coefficient of dynamic friction tests

Product assessed	Assessment method	Requirement	Result
Permo Air 160 Air Open Roofing Membrane	BBA Internal Test Specification T1/10	Value achieved	
	Coefficient of friction - Dry		
	Machine	1.03	
	Cross	1.00	
	BBA Internal Test Specification T1/10		
	Coefficient of friction - Wet		
Machine	0.67		
Cross	0.64		

5 Protection against noise

Not applicable.

6 Energy economy and heat retention

Not applicable.

7 Sustainable use of natural resources

The product contains polyolefins, which can be recycled.

8 Durability

8.1 The potential mechanisms for degradation and the known performance characteristics of the materials in the product were assessed.

8.2 Specific test data were assessed and are given in Table 8.

Table 8 Results of durability tests

Product assessed	Assessment method	Requirement	Result
Permo Air 160 Air Open Roofing Membrane	Dimensional stability to BS EN 1107-2 : 2001 Longitudinal direction Transverse direction	≤2%	Pass Pass
Permo Air 160 Air Open Roofing Membrane	Tensile strength to BS EN 12311-1 : 2000 -336h UVA at 50°C followed by 90 days heat ageing at 70°C Longitudinal direction Transverse direction	< 30% change	Pass Pass
Permo Air 160 Air Open Roofing Membrane	Elongation to BS EN 12311-1 : 2000 -336h UVA at 50°C followed by 90 days heat ageing at 70°C Longitudinal direction Transverse direction	Values achieved	40% 68%
Permo Air 160 Air Open Roofing Membrane	Resistance to water penetration to BS EN 1928 : 2000 -336h UVA at 50°C followed by 90 days heat ageing at 70°C	No leakage	Pass

8.3 Service life

8.3.1 Under normal service conditions, the product will have a service life comparable with that of traditional roof tile underlays, provided it is not exposed to sunlight for long periods, and it is designed, installed and maintained in accordance with this Certificate and the Certificate holder's instructions.

8.3.2 The exposure of the product prior to completion of the roof must be kept to a minimum. Advice regarding exposure can be obtained from the Certificate holder, but such advice is outside of the scope of this Certificate.

PROCESS ASSESSMENT

Information provided by the Certificate holder was assessed for the following factors:

9 Design, installation, workmanship and maintenance

9.1 Design

9.1.1 The design process was assessed by the BBA, and the following requirements apply in order to satisfy the performance assessed in this Certificate.

9.1.2 Project design wind speeds for the roof in which the product is installed must be determined, and wind uplift forces calculated, by a suitably experienced and competent individual, in accordance with BS EN 1991-1-4 : 2005 and its UK National Annex.

9.1.3 In common with all roofs, care must be taken in the overall design and installation to minimise the risk of water vapour coming into contact with cold parts of the construction. Factors to be considered and minimised include moisture diffusion through the ceiling, infiltration through unsealed openings/penetrations in the ceiling, and services evaporating or venting moisture into cold spaces.

9.1.4 When used in direct contact with treated timber the advice of the Certificate holder must be sought on compatibility, but such advice is outside of the scope of this Certificate.

9.1.5 The risk of condensation is assessed in accordance with BS 5250 : 2021.

9.1.6 Where the external rood covering is deemed air impermeable, eg, tight fitting slates/tiles, the batten space above the underlay is ventilated and at least 25 mm deep.

9.2 Installation

9.2.1 Installation instructions provided by the Certificate holder were assessed and judged to be appropriate and adequate.

9.2.2 Installation must be carried out in accordance with this Certificate and the Certificate holder's instructions and the relevant recommendations of BS 5534 : 2014, BS 8000-0 : 2014 and BS 8000-6 : 2023. Installation can be carried out under all conditions normal to roofing work. A summary of instructions and guidance is provided in Annex A of this Certificate.

9.2.3 The NHBC requires that the product, once installed, must be inspected in accordance with of *NHBC Standards 2023*, Chapter 7.2 *Pitched roofs*. Any damage to the product assessed in this Certificate must be repaired in accordance with section 9.4 of this Certificate and reinspected, in order to maintain product performance.

9.2.4 The product must be installed with the coloured or printed side uppermost and lapped to shed water out and down the slope.

9.2.5 Overlaps must be provided with the minimum dimensions given in Table 9. The Certificate holder's advice must be sought when using TR Plus Tape for sealing laps, but such advice is outside of the scope of this Certificate.

Table 9 Minimum overlaps

Roof pitch (°)	Horizontal laps (mm) untaped and taped		Vertical laps (mm)
	Not fully supported	Fully supported	
12.5 - 15	225	150	100
≥15	150	100	100

9.2.6 Hips must be covered with a 600 mm wide strip of the product.

Procedure

Unsupported

9.2.7 The product, when installed as part of an unsupported system, must be fixed in the traditional method for roof tile underlays, i.e., draped between the rafters to allow drainage of liquid water under the tiling battens.

Fully supported

9.2.8 The product may be used over suitable traditional boards with 2mm gaps, and over rigid insulation where no sarking board is present, either with continuous insulation or insulation placed between the rafters. The product may also be used over suitable timber-based sarking (Type 3 particleboards, Type 3 OSB or Type 2 plywood). In such cases where non breathable boarding is used a gap should be maintained between the insulation and the boarding and ventilated in accordance with BS 5250 : 2021.

9.2.9 The product is secured to the support with counter battens at least 12 mm thick to create a drainage and vapour dispersal space⁽¹⁾ between the product and the tiles or, when using timber sarking, the traditional Scottish practice is employed, with the tiles or slates fixed directly into the boards.

(1) See section 9.1.6

9.2.10 Counter battens, when used, are fixed with corrosion-resistant staples or galvanized clout nails as appropriate. Tiling battens are secured to the counter battens and support fixings.

9.2.11 Care must be taken to minimise the risk of interstitial condensation, particularly for timber sarking which may be below the dew-point for extended periods during winter months.

9.3 Workmanship

Practicability of installation was assessed by the BBA, on the basis of the Certificate holder's information and BS 5534 : 2014. To achieve the performance described in this Certificate, the product can be installed by a competent general builder, or a contractor, experienced with this type of product.

9.4 Maintenance and repair

9.4.1 As the product is confined in a roof structure and has suitable durability, maintenance is not required. However, any damage occurring before enclosure must be repaired.

9.4.2 Damage to the product can be repaired prior to the installation of slates or tiles, by replacing the damaged areas or by patching and sealing correctly. Care must be taken to ensure that the watertightness of the roof is maintained.

10 Manufacture

10.1 The production processes for the product have been assessed, and provide assurance that the quality controls are satisfactory according to the following factors:

10.1.1 The manufacturer has provided documented information on the materials, processes, testing and control factors.

10.1.2 The quality control operated over batches of incoming materials has been assessed and deemed appropriate and adequate.

10.1.3 The quality control procedures and product testing to be undertaken have been assessed and deemed appropriate and adequate.

10.1.4 The process for management of non-conformities has been assessed and deemed appropriate and adequate.

10.1.5 An audit of each production location was undertaken, and it was confirmed that the production process was in accordance with the documented process, and that equipment has been properly tested and calibrated.

† 10.2 The BBA has undertaken to review the above measures on a regular basis through a surveillance process, to verify that the specifications and quality control operated by the manufacturer are being maintained.

11 Delivery and site handling

11.1 The Certificate holder stated that the product is delivered to site in packaging bearing the Certificate holder's marketing company's name, the grade identification and the BBA logo incorporating the number of this Certificate.

11.2 Delivery and site handling must be performed in accordance with the Certificate holder's instructions and this Certificate, including:

11.2.1 Rolls must be stored on their sides, on a level, clean surface, under cover and protected from sunlight.

Supporting information in this Annex is relevant to the product but has not formed part of the material assessed for the Certificate.

Construction (Design and Management) Regulations 2015

Construction (Design and Management) Regulations (Northern Ireland) 2016

Information in this Certificate may assist the client, designer (including Principal Designer) and contractor (including Principal Contractor) to address their obligations under these Regulations.

UKCA marking

The Certificate holder has taken the responsibility of UKCA marking the product in accordance with Designated Standard EN 13859-1 : 2010.

CE marking

The Certificate holder has taken the responsibility of CE marking the product, in accordance with the harmonised European Standard EN 13859-1 : 2010.

Management Systems Certification for production

The management system of the manufacturer has been assessed and registered as meeting the requirements of BS EN ISO 9001 : 2015 by TÜV Hessen (Certificate 73100176).

Additional information on installation

A.1 Where possible, eaves guards should be used to protect the product from sunlight and to direct water into the gutter.

Condensation

A.2 The risk of condensation is highest in new-build construction during the first heating period, where there is high moisture loading owing to wet trades, such as in-situ cast concrete slabs or plaster. The risk of condensation diminishes as the building dries out. See BBA Information Bulletin No 1 — *Roof Tile Underlays in Cold Roofs during the Drying-out Period*.

Inclined ceiling and insulation

A.3 For roofs with an insulated inclined ceiling, ventilation above or below the underlay will not be required provided that the passage of moisture by diffusion and by convection is controlled, eg, by a vapour control layer or a continuous envelope of insulation with a high vapour resistance and with sealed joints. Ventilation may be required if specified by the tile manufacturer or where the roof covering is airtight, as described in BS 5250 : 2021.

Partially inclined ceiling and insulation

A.4 Where an insulated ceiling spans only part of the roofline, resulting cold roof spaces must be ventilated in accordance with BS 5250 : 2021, Section 4, Subsection 12.

Finishing

A.5 Detailing of abutments, verges and hips must be in accordance with the Certificate holder's instructions.

A.6 The tiling and slating must be carried out in accordance with the relevant clauses of BS 5534 : 2014, BS 8000-0 : 2014, BS 8000-6 : 2023 and the tile/slate manufacturer's instructions, especially when using tightly jointed slates or tiles.

BS EN ISO 11925-2 : 2020 *Reaction to fire tests — Ignitability of products subjected to direct impingement of flame — Single-flame source test*

BS EN ISO 12572 : 2001 *Hygrothermal performance of building materials and products — Determination of water vapour transmission properties*

Conditions of Certificate

Conditions

1 This Certificate:

- relates only to the product that is named and described on the front page
- is issued only to the company, firm, organisation or person named on the front page – no other company, firm, organisation or person may hold or claim that this Certificate has been issued to them
- is valid only within the UK
- has to be read, considered and used as a whole document – it may be misleading and will be incomplete to be selective
- is copyright of the BBA
- is subject to English Law.

2 Publications, documents, specifications, legislation, regulations, standards and the like referenced in this Certificate are those that were current and/or deemed relevant by the BBA at the date of issue or reissue of this Certificate.

3 This Certificate will be displayed on the BBA website, and the Certificate Holder is entitled to use the Certificate and Certificate logo, provided that the product and its manufacture and/or fabrication, including all related and relevant parts and processes thereof:

- are maintained at or above the levels which have been assessed and found to be satisfactory by the BBA
- continue to be checked as and when deemed appropriate by the BBA under arrangements that it will determine
- are reviewed by the BBA as and when it considers appropriate.

4 The BBA has used due skill, care and diligence in preparing this Certificate, but no warranty is provided.

5 In issuing this Certificate the BBA is not responsible and is excluded from any liability to any company, firm, organisation or person, for any matters arising directly or indirectly from:

- the presence or absence of any patent, intellectual property or similar rights subsisting in the product or any other product
- the right of the Certificate holder to manufacture, supply, install, maintain or market the product
- actual installations of the product, including their nature, design, methods, performance, workmanship and maintenance
- any works and constructions in which the product is installed, including their nature, design, methods, performance, workmanship and maintenance
- any loss or damage, including personal injury, howsoever caused by the product, including its manufacture, supply, installation, use, maintenance and removal
- any claims by the manufacturer relating to UKCA marking and CE marking.

6 Any information relating to the manufacture, supply, installation, use, maintenance and removal of this product which is contained or referred to in this Certificate is the minimum required to be met when the product is manufactured, supplied, installed, used, maintained and removed. It does not purport in any way to restate the requirements of the Health and Safety at Work etc. Act 1974, or of any other statutory, common law or other duty which may exist at the date of issue or reissue of this Certificate; nor is conformity with such information to be taken as satisfying the requirements of the 1974 Act or of any statutory, common law or other duty of care.
